You can deposit two types of data packages. A verification package focusses on transparent, reproducible research. A reuse package focusses on interpretable data, reusable for new research, more independent of the publication. You can also combine the verification and reuse package, by depositing the content for both purposes in a public data repository.

Be aware that privacy-sensitive data can in many cases not be publicly available.

Physical Sample	Consider making available upon request	
Sample description	Publish in Paper	Publish in data repository
Experimental protocol	Publish in Paper	Publish in data repository
3rd party software	Reference in Paper	
Code supporting workflow	Archive/data repository for verification	
Raw data	Publish in data repository	Archive/data repository for verification
Processed data	Archive/data repository for verification	
Analysed data	Publish in Paper	Archive/data repository for verification
